21ST CENTURY KNOWLEDGE AND SKILLS IN EDUCATOR PREPARATION

September 2010

This paper has been produced as part of a collaborative project by the American Association of Colleges of Teacher Education and the Partnership for 21st Century Skills (P21).

Funding for the project was generously provided by Blackboard, ETS, Intel, National Education Association, Microsoft and Pearson.

1. The goal: To provide all students with 21st Century education
2. Redesign of TE programs based on collaboration between Higher Ed, schools, & communities (each organization to develop 21st Century blueprint to meet needs of learners)
3. Teachers & Admin will **possess, teach and assess 21st Century Skills/Knowledge**
4. New teachers as agents of change - for all subjects and all grades - possess, teach and assess 21st Century Skills/Knowledge
5. TE programs will be sources of leadership, research and evaluation on 21st Century Skills/Knowledge

21st Century Skills/Knowledge

What are they?

21st Century Learning?

But what does this
21st Century Learning
look like?

21st Century Resources To Enhance Student Learning

Wikis/ Blogs

Social Networking

Web 2.0

So You Can Surf...Now What? Web 2.0

Web 2.0 is the latest version of the web where users are interacting and collaborating real-time. Participants will be presented with the best Web 2.0 free resources and websites, as well as ideas for implementation into both their classrooms and personal lives. They will be able to identify the characteristics of a Web 2.0 resource, demonstrate an understanding of Web 2.0 and its uses by brainstorming on how they can be incorporated into the classroom. Participants will also learn to use the information provided to access free resources and websites designed with students and teachers in mind and explore the 21st Century Resource page for hands-on Web 2.0 experiences.

Presentation Title: Googlios: A 21st – Century Approach to Teaching, Learning, & Assessment

Presentation Description: As the first decade of the 21st century comes to end and blogs, wikis, and podcasts have become more mainstream, it is important that educators step back to see how we, as professionals, are best using these tools to serve our students' learning needs. If these modern technologies are going to be sustained in contemporary pedagogy, it is time that we "kick it up a notch"

21st Century PD is on wikis

I am becoming convinced that all, or at least most, of the professional development sessions we participate in as educators and share with others should be organized via linked wikis. Dean did a great job modeling this last month in his [multi-day digital storytelling workshop](#). I attempted this in June when I facilitated several workshops with teachers in College Station, Texas (Bryan ISD) [focused on digital literacy](#)— primarily the use of blogs and podcasts to help teachers develop both traditional and 21st century literacy skills. I started a [blogging tools wiki](#) a few weeks ago after [an engaging skypecast on this topic](#). At the 2006 conference I attended 2 weeks ago in Winfield, Kansas [utilized a conference wiki](#) that a fair number of folks have contributed to successfully.

So, why all this educational wiki-use? I think the answers are pretty straightforward:

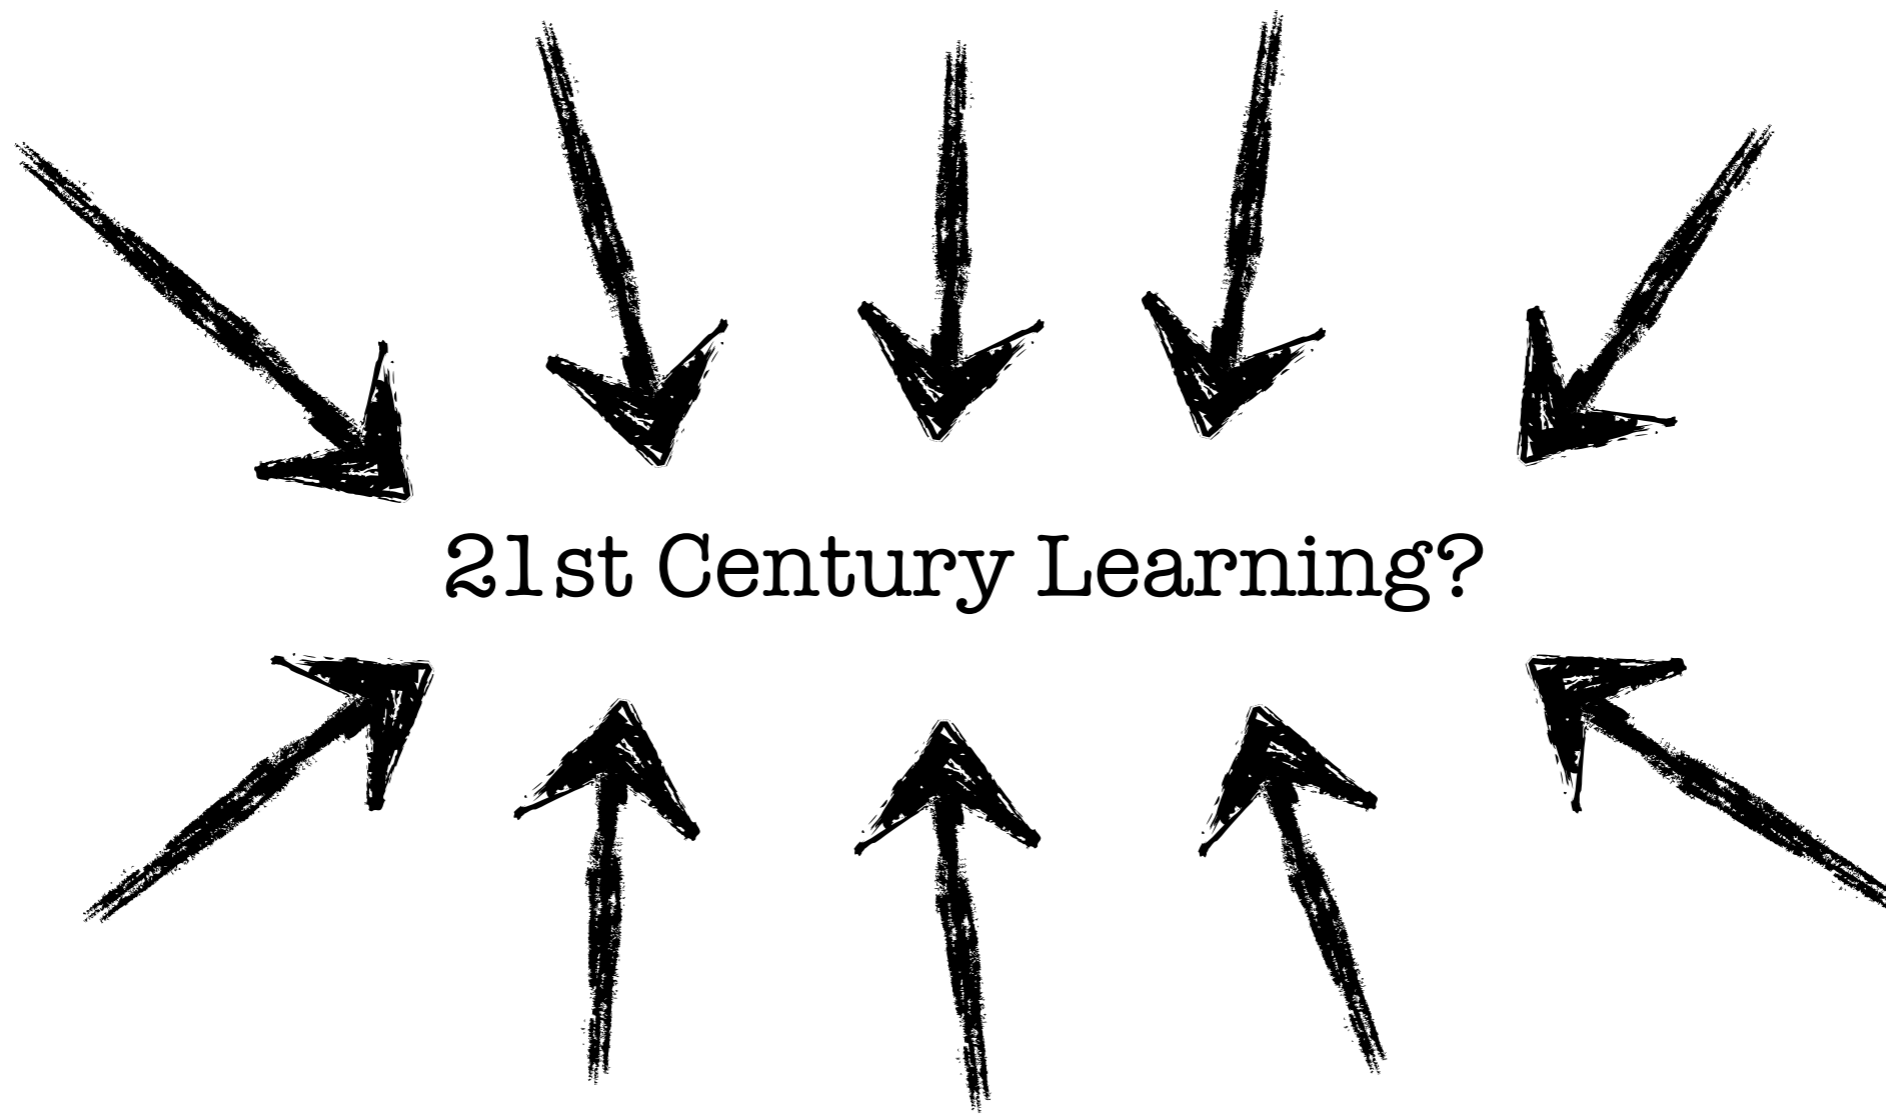

1. Wikis are collaborative, and one of the ideas we want students and teachers to both understand and LIVE is the idea that groups of people can come up with better ideas and solutions than people working in isolation.
2. Wikis are iterative, meaning that they improve over time. They are not a single snapshot or a static creation, but rather a dynamic, living creation that continues to grow as ideas change and evolve over time.
3. Wikis are free. As teachers, we like free stuff. And wikis don't cost anything to create in our present climate of abundant web 2.0 free tools.
4. Wikis are RSS subscribable, which makes them easier to track and update. More information services in the coming years will embrace RSS for this reason: Pulling information of interest to you is much more preferable than having information PUSHED to you that may or may not be desired.
5. We learn best by experiencing pedagogy and technology: Using wikis permits teachers to take on the role of learners, and directly experience how simple wikis are and can be for instruction— and especially group work.
6. Wikis are fast to create and update. I've been making webpages to accompany my educational technology workshops since the mid-1990s, and I've never used anything as fast and easy as a wiki. Yes, using a tool like Dreamweaver I can create a website with many more bells and whistles, but I think education should generally be more on CONTENT and IDEAS rather than bells and whistles. Attendees and our own students may lose sight of the

Compare to the
first decade (or so)
of the 20th Century

1900 - 1912

1900	Zeppelin, escalator
1901	Radio, vacuum cleaner
1902	Air conditioner, neon light, teddy bear
1903	Crayons, first flight, tungsten for bulbs
1904	Teabags, vacuum diode
1905	Theory of relativity
1906	Cornflakes, sonar, triode
1907	Synthetic plastic (bakelite), color photo, helicopter
1908	Cellophane, geiger counter
1909	Instant coffee
1910	Talking motion picture
1911	Electrical ignition system for cars
1912	Motorized movie cameras, life savers candy, tank
1913	Crossword puzzle, bra, zipper

Imagine basing 20th
century learning on these
technologies...

Nothing | has changed

Nothing
Everything

has changed

How do new technologies
change teaching &
learning?

How does TTF change
teaching & learning?

Are we asking the wrong
question?

Bertram “Chip” Bruce

Technological determinism

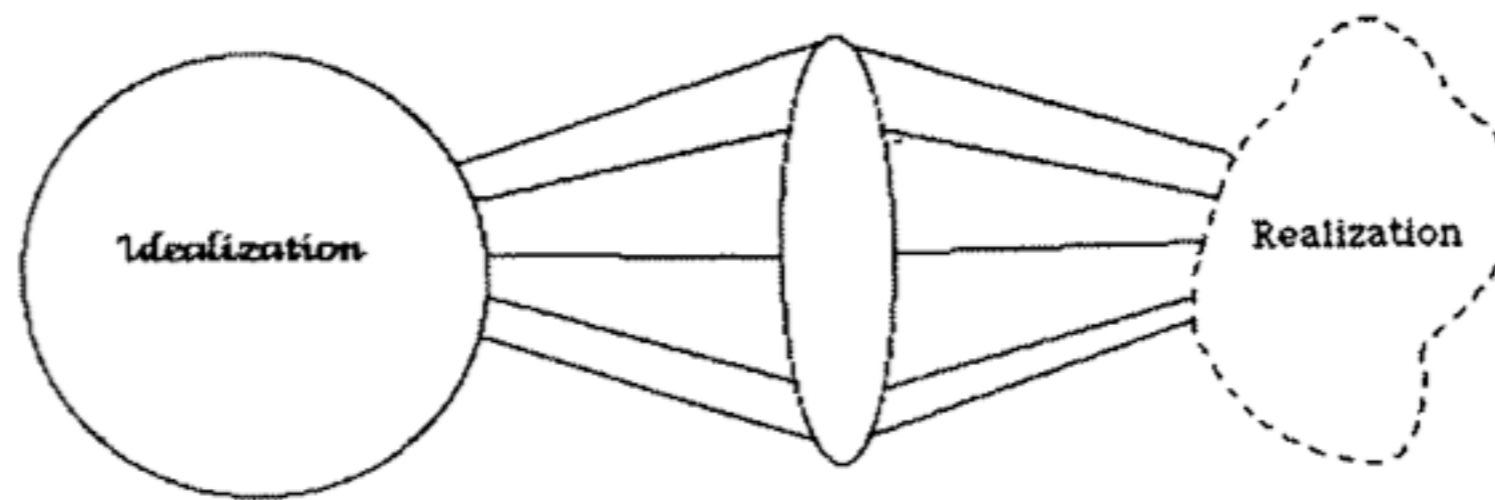

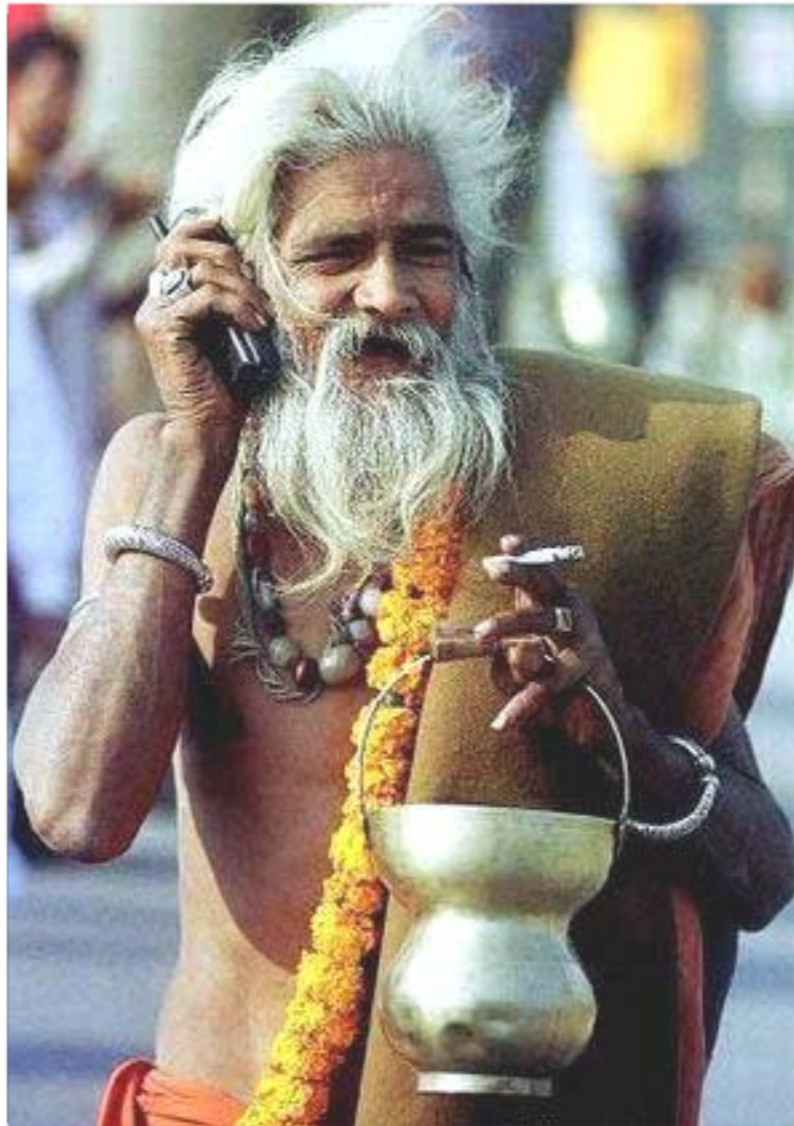

Figure 1-1. A Platonic view of the realization process

Technology as social practice

“Missed call”

Social practices “shape” the ways
in which technology is
understood & used

Meaning making as a transactional process - between the innovation & social structures & relationships

Beauty lies in the eye of the beholder,
but is inseparable from the flower — Bob Stake

The **design** of any technology must be understood not simply as the construction of a physical artifact to meet a functional specification, but as a **process** in which **relations among people are realized**.

We cannot specify the pure, or ideal, case for the use of an innovation, only its idealization in the minds of the developers.

Users inevitably interpret an innovation in distinctive ways, apply it idiosyncratically in their own contexts, and even recreate it to satisfy their own needs

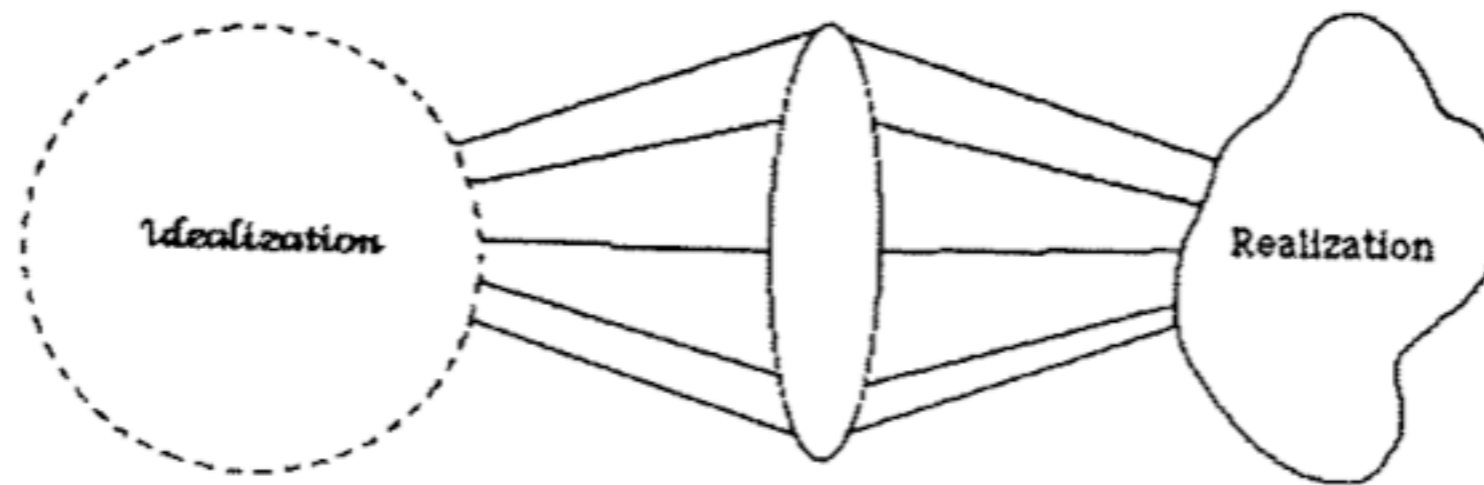

Figure 1-2. A Wittgensteinian view of the realization process

... but it is more
complicated than that!

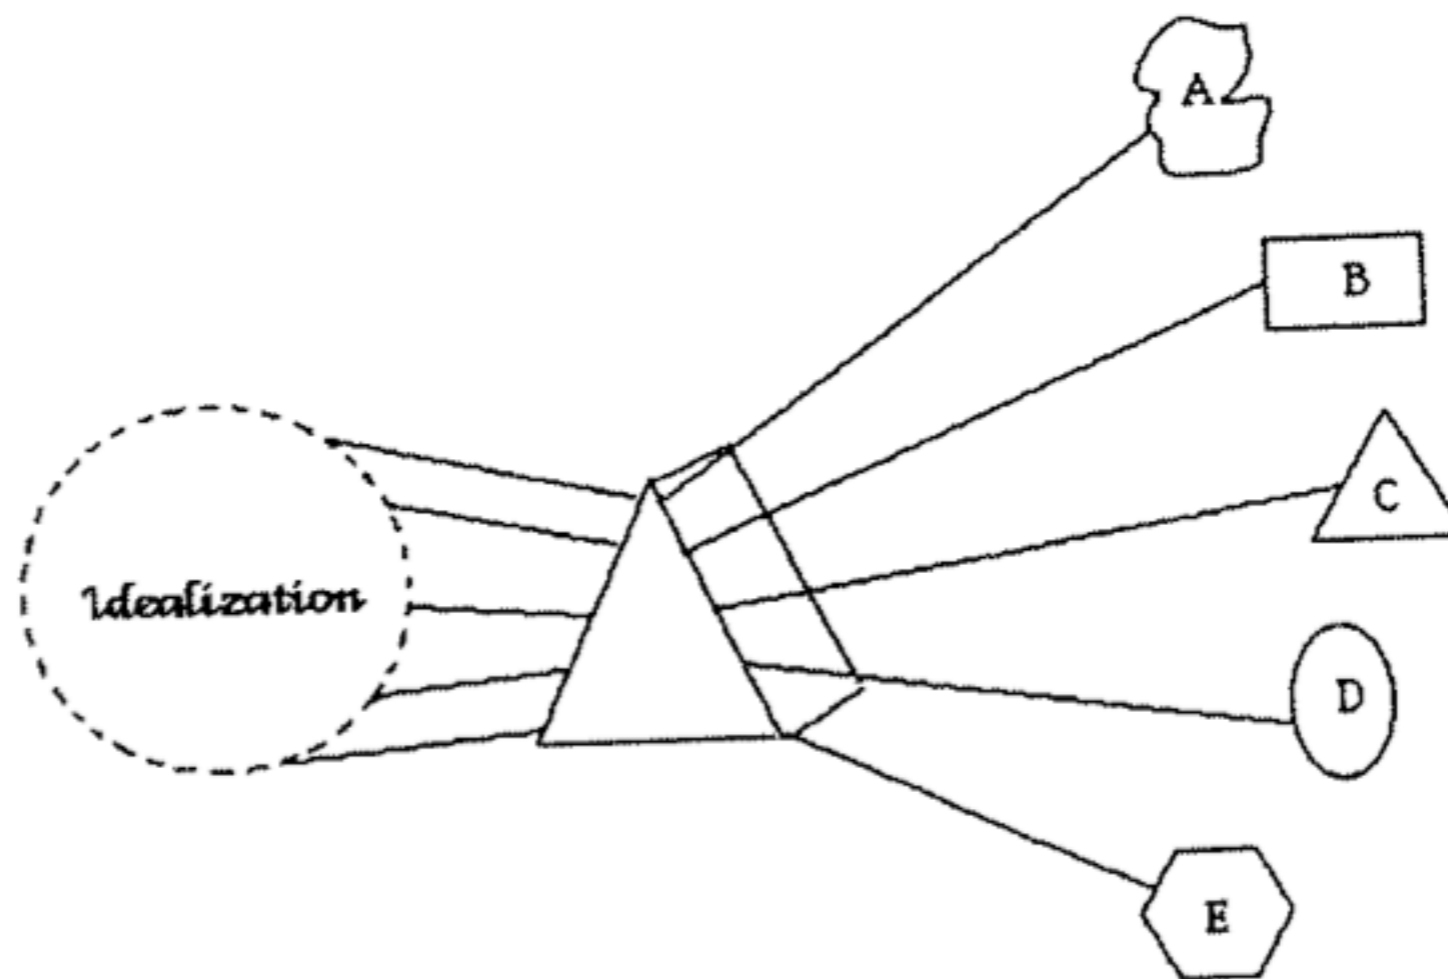

Figure 1-3. Alternate realizations of an innovation

What is

Teaching Teachers for the Future

One innovation
(with 41 instantiations?)

OR

41 different innovations
(with one idealization)

Why is this important?

It has to do with...

What we learn...

& what we contribute to the
broader conversation...
